

Jamison Jordan Notes on Building Mt. St. Helens Touralux with #173-58 HO sides 3-26-2023

I did manage to get the Touralux sides to fit a Walthers coach using a few shims behind the brass. The ribs are .75mm styrene fastened to the side of the car with a thin bead of JB Weld. The window glaze is a cyan gel sheet used for stage lights. I used Loctite Gel to fasten the sides to the main body of the car.
